

Incident Report 6/6/2026

Investigator - Dee Marrero

Summary

June 6, 2026 a network review identified suspicious outbound http traffic originating from an internal workstation. The investigation of the packet capture information confirmed that the host was compromised by NetSupport Manager RAT (Remote Access Trojan Malware). The malware established a persistent backdoor connection. The investigation was done through an isolated virtual machine.

Victim Profile

Through analysis of Kerberos, DHCP, HTTP, and SMB2 layers the following information has been gathered on the identity of the compromised endpoint.

IP ADDRESS : 10.2.28.88
MAC ADDRESS : 00:19:d1:b2:4d:ad
HOST NAME : DESKTOP_TeyQ2NR
USER NAME : brolf
FULL NAME : Becka Rolf

Indicators of Compromise

The following are digital footprints left by the attacker that were discovered during the analysis

Malicious C2 IP ADDRESS : 45.131.214.85
Malicious URL ENDPOINT : /fakeurl.htm
USER_AGENT FLAG : NetSupport Manager/1.3

Timeline and Analysis

User brolf logged into domain EASYAS123 via host DESKTOP_TeyQ2NR
The NetSupport RAT payload was executed on the host
The malware immediately began sending outbound HTTP requests to the external IP 45.131.214.85
Traffic identified itself via the NetSupport Manager/1.3 User-Agent String, maintaining an active remote access backdoor.

Remediation Recommendations

To fully resolve incident and ensure no further persistence

Disconnect HOST : DESKTOP_TeyQ2NR from the physical and wifi network to stop attacks remote control session
Force immediate password reset for the brolf account as local credentials may have been duped

Re-image the workstation or use EDR tool to completely remove the unauthorized NetSupport software

Add the attacks IP address to the firewall to prevent any future attacks
